

# The Total Solution for Better Inventory Accuracy

## RFID for Real-Time Visibility, Tracking, and Accuracy

Every retail store manager wants to know where items are at any given time. At Snively, we've made it possible with our custom RFID tracking solutions, which put real-time and accurate inventory insights at your fingertips. Our technologies and software help you achieve unprecedented inventory accuracy and ensure you know what you have, where it is at all times, and when it's time to re-order. It's the simple, yet total, solution that helps to minimize wasted time and increase accuracy and efficiency.

### Accurate and Reliable Inventory Tracking

Using our SIS software and specialized Zebra RFID tags, readers, and antennas, we deliver a complete solution that automatically identifies, tracks, and locates your inventory in real time. There's no need to line up a barcode scanner, scan a barcode, or manually track your inventory. One custom solution does it all for you automatically and remotely, using radio waves.

### How It Works

#### TAG YOUR ITEMS

Tag your items with Zebra RFID tags and labels, using our automated printing and encoding solutions. Each tag is like a unique license plate for your asset, enabling real-time identification and tracking as items move through your facilities.

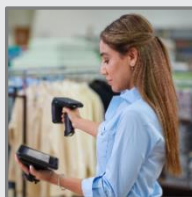

#### CONFIGURE RFID PORTALS

Each Zebra RFID antenna is a portal that represents a location and tracks your tagged or labeled items as they move past it. Portals can be established on assembly lines, dock doors, warehouse floors, conveyors, and more.

#### TRACK YOUR ITEMS

As tagged items move through or pass an RFID portal, the RFID reader and antenna detect the tag, and SIS logs the transaction and updates the item's location. All data can be queried through the SIS Control Panel, providing full visibility into each item's current location and location history.

#### SAVE TIME AND MONEY

With SIS, perform data inquiries and updates, fast and accurate physical inventories, quickly locate items from up to 50' away, prevent losses, and more. The benefits of SIS increase productivity and efficiency, saving your business valuable time and money.

## Powered by Zebra RFID Technologies

### Handheld Readers

Mobile handheld readers remotely identify, locate, and track tagged or labeled items for maximum visibility into your inventory.

### Fixed Readers

Fixed RFID readers provide automated tracking as items move into, out of, and through strategic locations in your industrial operations.

### Antennas

High-throughput, high-capacity RFID antennas ensure reliable real-time tracking in the densest and most challenging RF environments.

### RFID Labels and Supplies

Stock and custom RFID labels and tags offer the widest selection for general purpose, advanced, and heavy industry applications.

### Printers

Industrial, desktop, and mobile RFID printers provide fast, smart, and scalable RFID encoding and rugged durability for harsh environments.

### Test and Deploy the Right RFID Solution

We'll help you determine the right RFID solutions to meet your critical business needs. Our Snively experts can provide RFID site surveys to assess your items and environment before we recommend or integrate any system. We then provide a proof of concept and conduct thorough testing and validation before we officially deploy your system.

### Optimize Your Inventory

Say goodbye to inaccurate inventory counts, out-of-stocks, over-ordering, manual inventory processes, and human error. Our SIS RFID solution gives you a complete and accurate snapshot of your inventory with item-level tracking and reporting, all in an easy-to-use application.

### Improve your Tracking with SIS

Need to automate and track your inspections for improved accuracy and efficiency? Our SIS software solution runs on Zebra handheld RFID readers and mobile computers, including all of the necessary tools and functions necessary for RFID implementations, along with built-in asset tracking and locationing. SIS is the complete end-to-end RFID tracking solution.

### Tap Our 20 years of Manufacturing ERP Experience

As a pioneer and continuing innovator of RFID and data capture solutions, Snively has served leading companies in manufacturing and heavy industries for over 20 years. By applying industry-specific strategic insights and best practices, we deliver technologies that integrate seamlessly into your IT systems and infrastructure to help you achieve your business goals.
